

Make a pinwheel

Make your own pinwheel with our template and practise using air power to make it move.

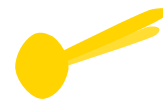

You will need:

paper

an unsharpened pencil with a rubber at the end

push pin or straight pin

Instructions:

- Cut out the pinwheel template on the next page and decorate it on both sides.
- Cut on the diagonal dotted lines (but don't cut all the way to the middle dot).
- Bend (don't fold) each corner to the dot in the centre.
- Push a pin through the centre into the pencil rubber.
- Blow the edge of your pinwheel to make it spin. If it doesn't spin, loosen your pin a little or wiggle it around to make the hole in the paper bigger.
